

***In-Sacco* v *In-Vitro* comparison of 48 hour dry matter disappearance of random feed samples.**

**Bar Diamond, Inc.  
March 24, 2009  
Gary L. Rohwer**

Thirty samples were digested in two different *In-Vitro* runs using four sub-samples of each sample in each run. Rumen fluid for the *In-Vitro* runs was provided by the rumen fistulated steer used for the *In-Sacco* comparison. Each sample used in the *In-Vitro* runs were used in the *In-Sacco* 48 hour rumen digestion. Three washout bags (time 0) were used to adjust for bag wash out on four sub-samples of each sample digested *In-Sacco* in the rumen for 48 hours.

**Comparison of InVitro to InSacco  
48 hr dry matter digestion coefficients**
